25<sup>th</sup> February, 2020.

Dear KPMG Recruiting Team,

I am excited to have the opportunity to apply for the Data Scientist consultant from at KPMG's Lighthouse.

Being from the Industrial engineering program with an emphasis in Data Analytics, I am trained to think analytically to understand the outcome of any model. For example, one of my university projects' scope was to analyze salaries of survey respondents and find trends that caused a salary correlation. Projects like these educated me on creative and analytical thinking of real-life scenarios, allowing me to explore avenues that make sense to arrive at a conclusion regarding the best solution possible and provide a coherent report on my findings which primarily relied on data visualization.

I also co-founded a company as a part of a summer project through the Hatchery at the University of Toronto. Through this experience, I am self-taught in Cloud computing where the web application was deployed through AWS elastic bean. Furthermore, I also developed a range of soft skills, including development and presentation of business models to investors and mentors from industry. The project secured us a place in the final round of the summer competition.

Through the University, I have been employed as a teaching assistant in database systems which allowed me to communicate with large crowds of students where I had to be coherent and comfortable communicating with large crowds of people.

KPMG's reputation as one of the big four auditing firms is very well established and being part of an organization that strives to set the pace for the market and the industry, is something I aspire to.

I thank you for this opportunity and if you have any questions, please feel free to contact me at [krutheeka.rajkumar@gmail.com](mailto:krutheeka.rajkumar@gmail.com) or at (647)-549-6432

Best Regards,

Krutheeka Rajkumar.
