Cover letter: Software Developer - Python Specialist StorageVault Canada Inc

Krutheeka Rajkumar

13th May 2020.

Dear StorageVault team,

As an engineer with extensive coding experience, I am thrilled to be applying to the position of software developer. Over the last 4 years, I have worked on developing my skill set in application development, backend architecture, web development and a few more projects that I think align with what you are looking for.

To outline a few skills that are in-line with what you are looking for:

1) I developed an app (and am currently working on a second web app) in Django framework and implemented JavaScript functionality.
2) Implemented a PHP system to display results of a python beautiful soup application.
3) I have integrated several API's (stripe, twitter, etc.) in various projects.

All these projects (except for project 1 – due to confidentiality) are available for me to share, upon request. I am currently in the process of re-doing my github and exhibiting all my files on my personal website.

While I have most of the experience you are looking for, I consider my biggest asset to be the fact that I am a self-starter. If I am lacking knowledge or skill in a topic, I will put in the work in my spare time to learn. This is reflected in all my extracurricular projects.

Please feel free to contact me with any questions you might have,

Best regards,

Krutheeka Rajkumar
