Campus Program,
Toronto, ON.

Dear Mr. Rick Bologna,

I am excited to have the opportunity to apply for the role of Machine Learning Engineer at Cerebri AI.

Cerebri AI is primary a software company primarily revolutionizing the delivery of AI as a SaaS platform and employing software engineers to do it. Being from a non-traditional software engineering background, I would have the perceptive beyond the product. With Cerebri moving into the automotive space, I would be able to deliver a mechanical engineer's perspective at various fronts.

Over the last year, I have learnt how to code in python, employ various ML libraries and deliver concrete results. Over the summer, I was self-taught in cloud computing (AWS) to deploy a web application that I built as part of an incubator competition – where we own the popular vote. I might not have the years of experience under my belt; however, my learning curve has kept up with steep incline and my desire to be the expert in this field is resolute.

As a co-founder of a start-up (Tray Solutions) myself – I understand the commitment and the self-starter attitude that is required. I understand the deliverables and deadlines to clients and the long hours that come with it. Through the creation of Tray, I have learnt to embrace these moments, as these were my defining milestones, it reinforced my commitment to my project and reiterated my desire to succeed in my undertaking.

I foresee Cerebri AI being the leaders in this new unexplored and uncontested space and I would love to be part of that journey.

I thank you for this opportunity and if you have any questions, please feel free to contact me at krutheeka.rajkumar@gmail.com or at (647)-549-6432

Best Regards,

Krutheeka Rajkumar.
